

Coronavirus in Hampshire – *Update*

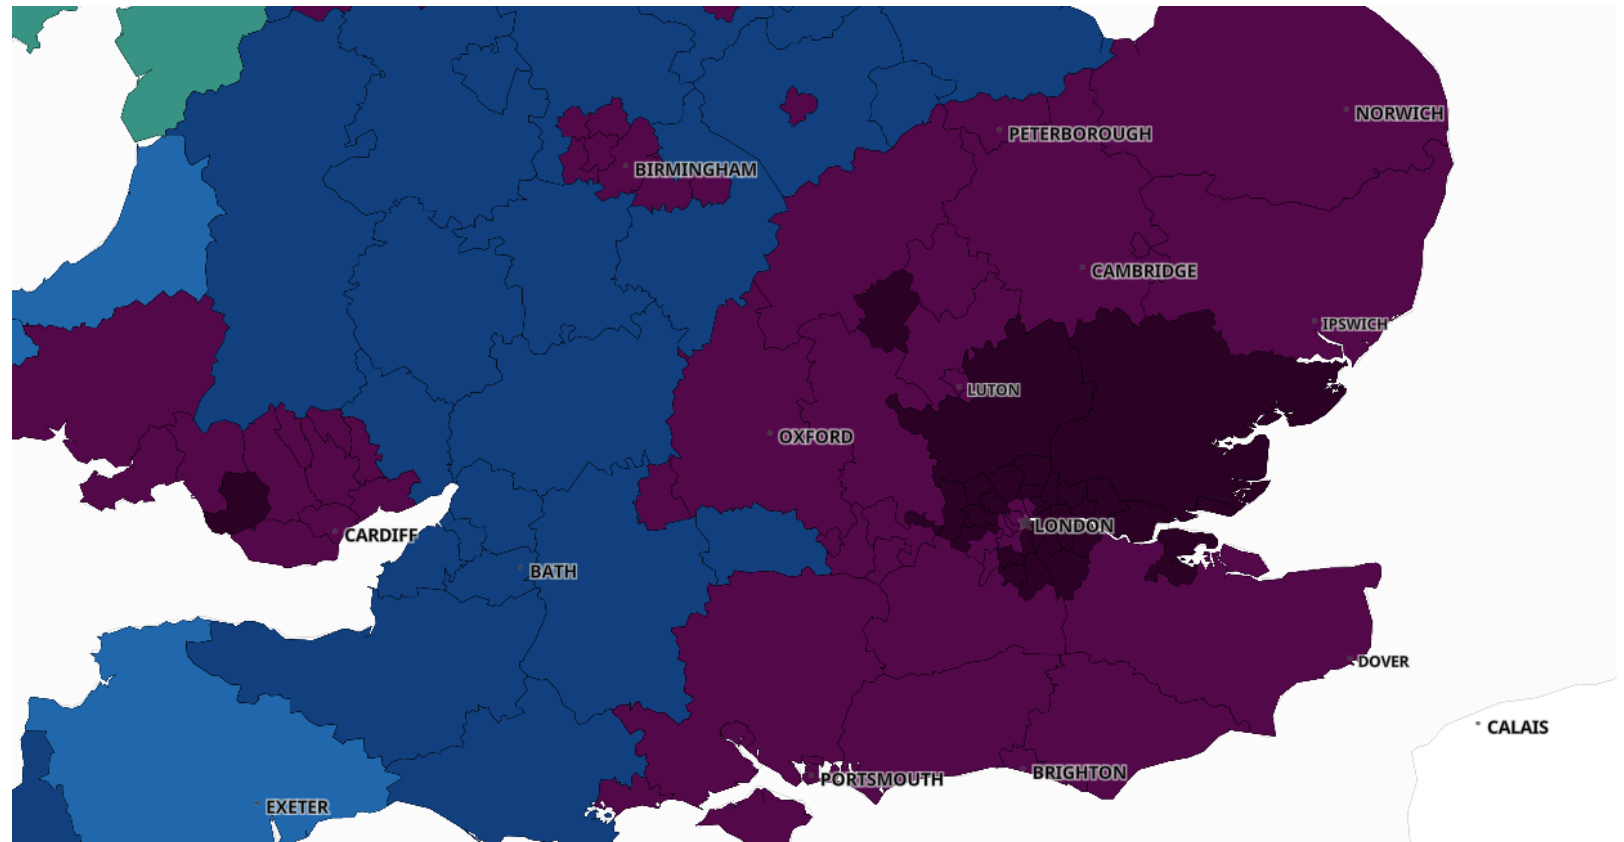

January 2021
1 December– 12 January

Data on district council areas

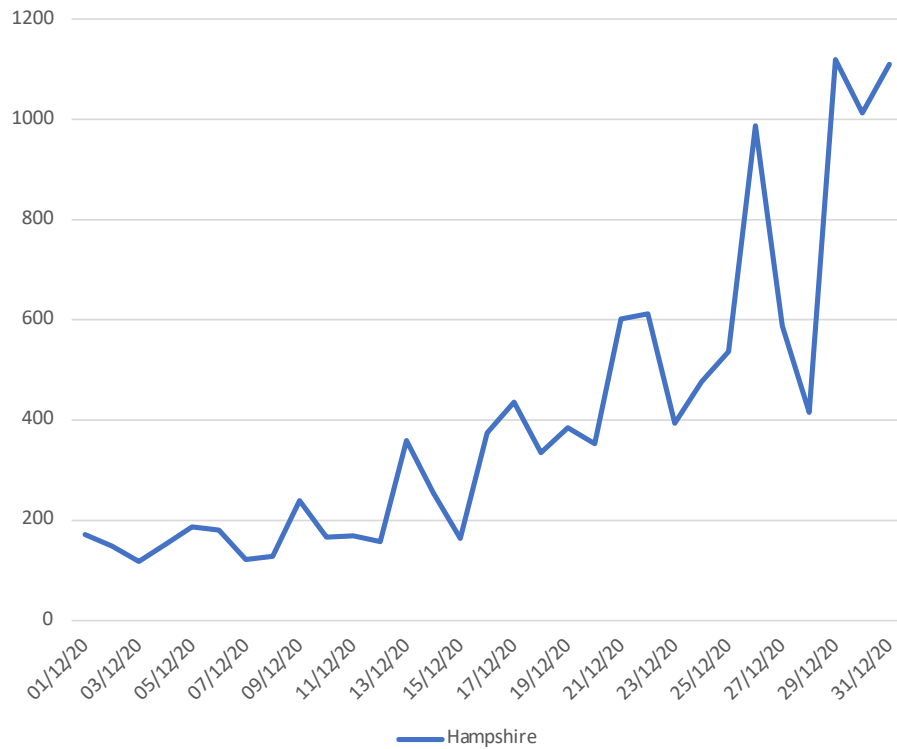

New strain of coronavirus advancing in south-east at year end

The position at 31 December as the new strain of covid-19 took hold in London and the south-east of England, and started to move rapidly westwards. This map is based on data which is five days behind the published daily figures and, in a rapidly-changing situation, will not reflect fully the current position on 5 January 2021.

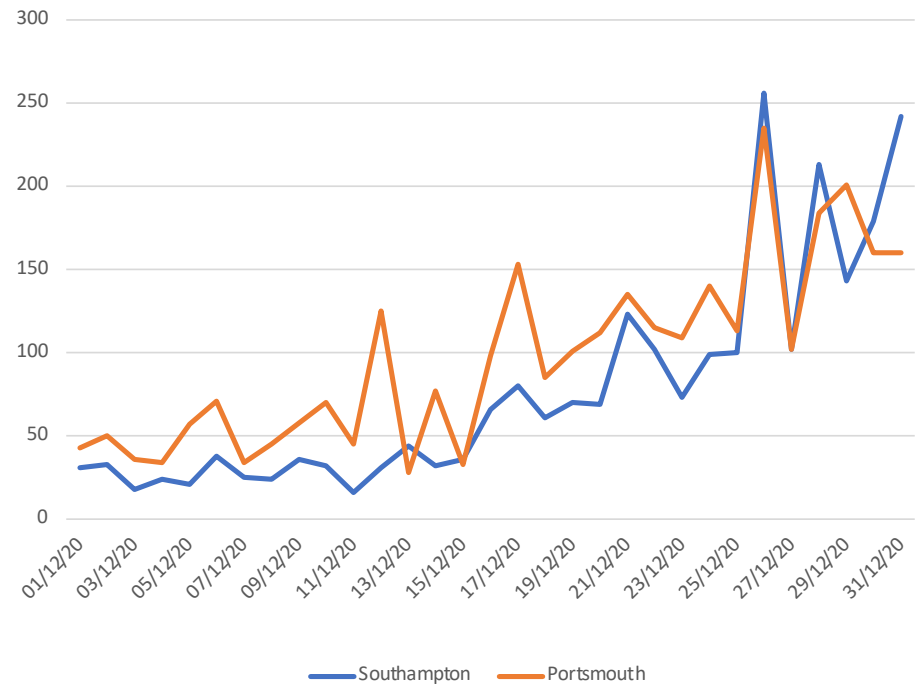

New covid-19 cases in December

Hampshire
new cases daily in December

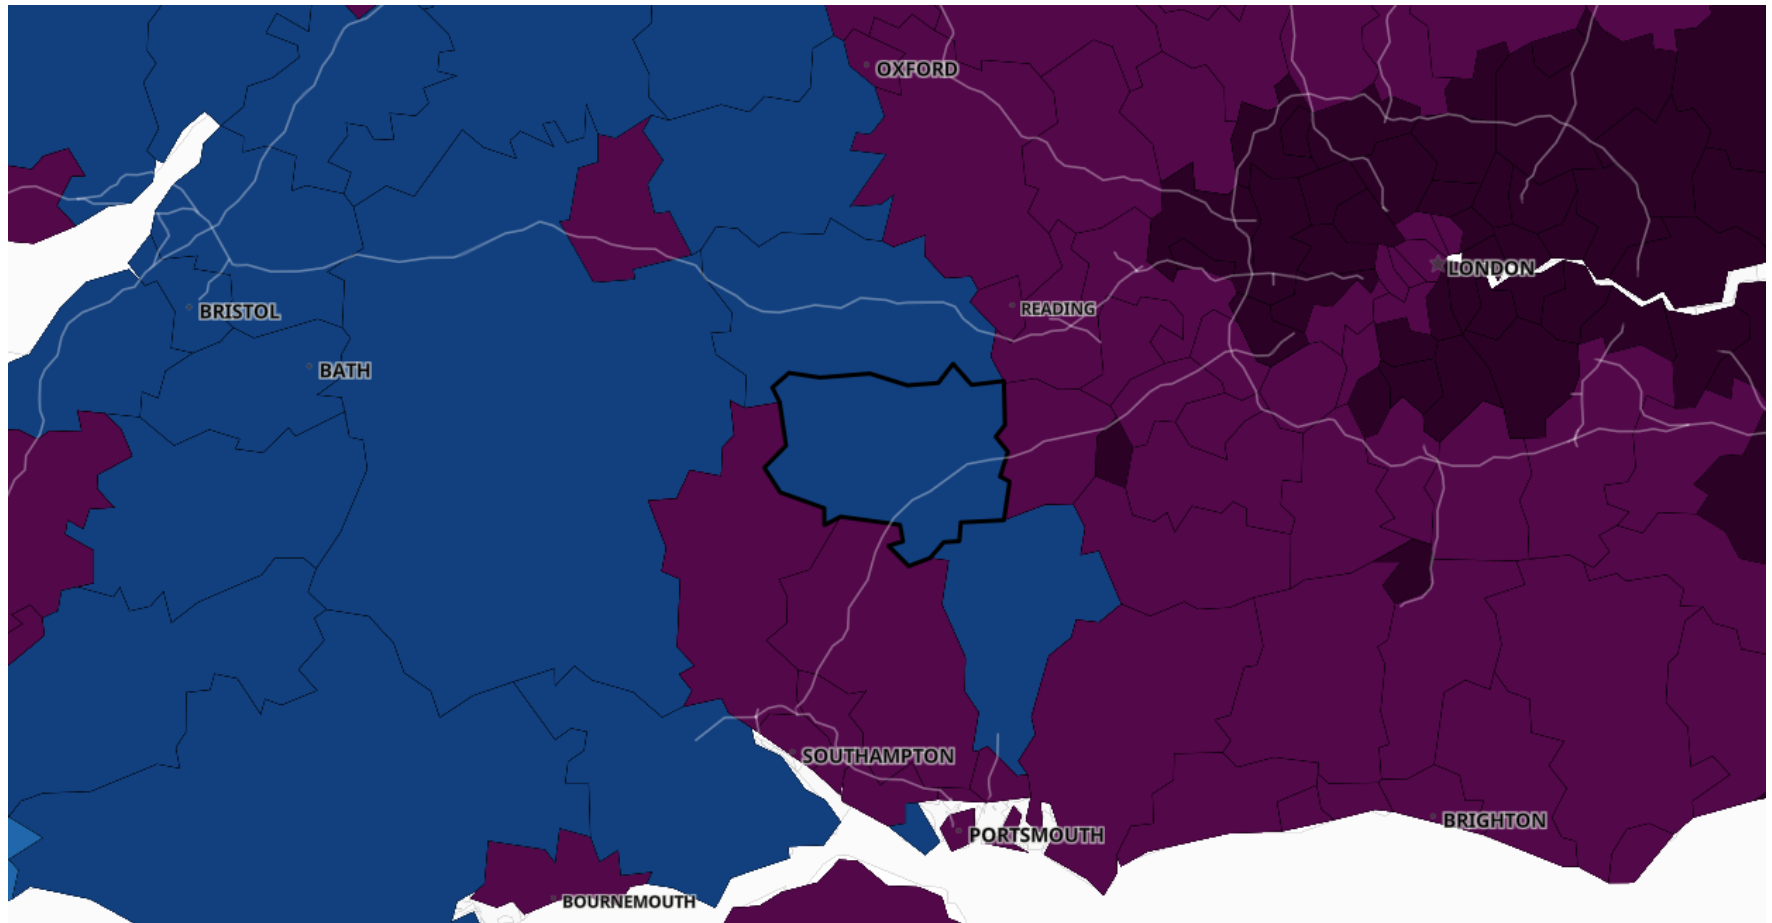

Portsmouth & Southampton
new daily cases in December 2020

BDBC at the front line against the new strain

Basingstoke & Deane on the front line against the spread of the new strain of Covid-19 advancing from Kent and the south-east.

This was the position at 31 December, which is five days behind the actual situation, which will have changed considerably in the intervening period.

New Alresford MSOA at 31 December

Alresford back in the “red” zone with 42 active cases and a rate of 496.4 per 100,000 inhabitants at 31 December

Key to map colours

Uncoloured - Less than three cases, ie no data

Yellow - 0 to 9 per 100k of population –

Light green - 10 to 49

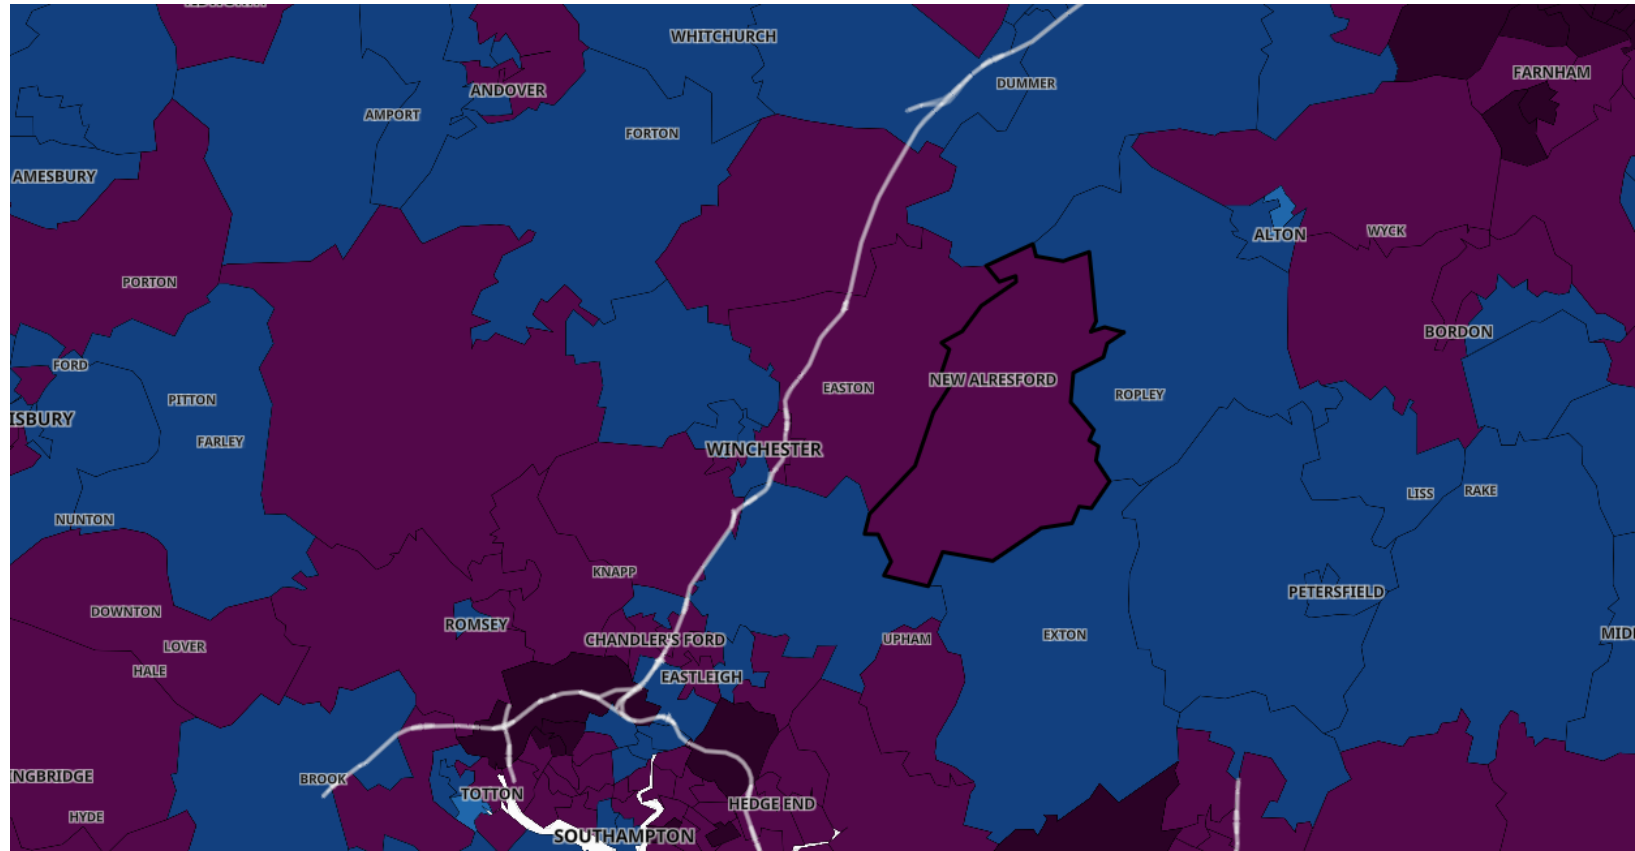

Dark green - 50 to 99

Light blue - 100 to 199

Dark blue - 200 to 399

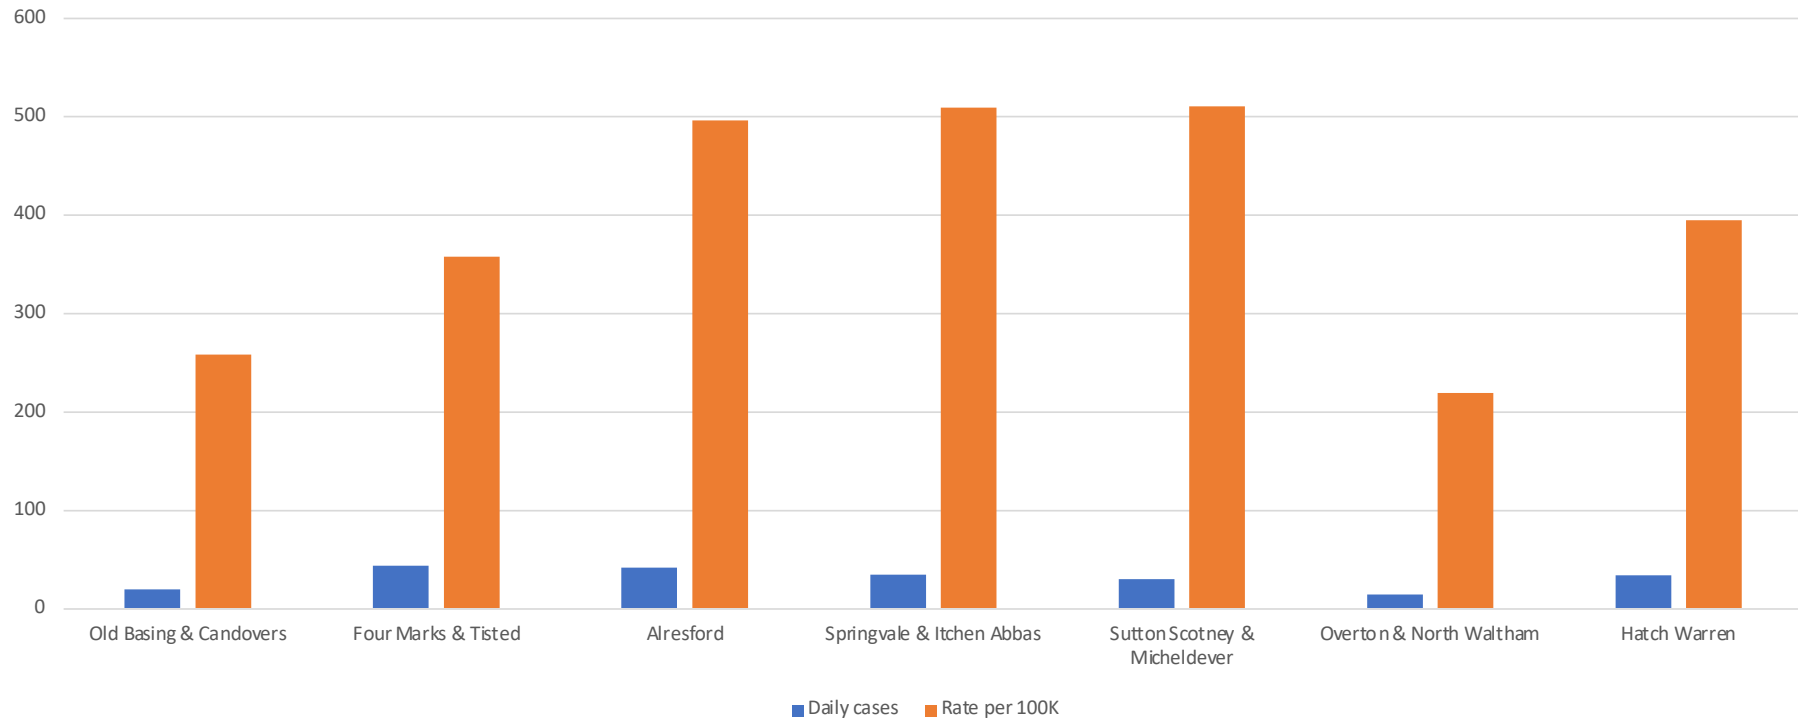

Dark red – 400 - 799

Black - 800 +

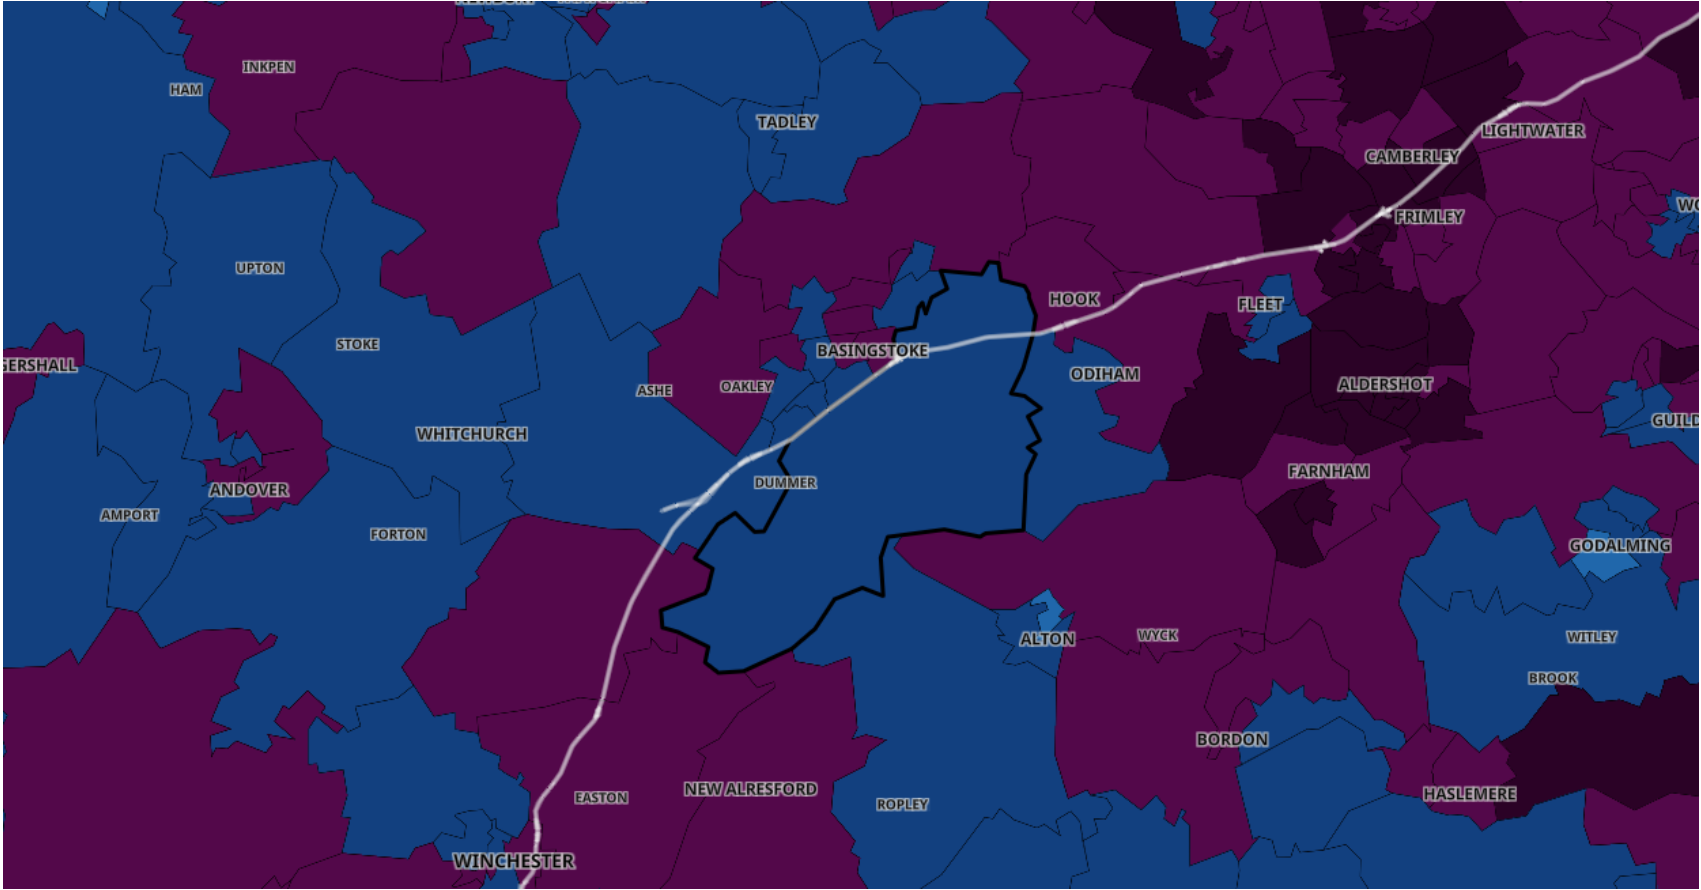

Candovers & neighbouring areas at year end

MSOAs - 31 December

Old Basing & The Candovers at end December

Old Basing & the Candovers at 31 December. Still out of the "red" zone but with a rising number of active cases – 20 and a rate of 258.5

Developments in New Year - south-east England on 7 January

Key to map colours

Uncoloured - Less than three cases, ie no data

Yellow - 0 to 9 per 100k of population –

Light green - 10 to 49

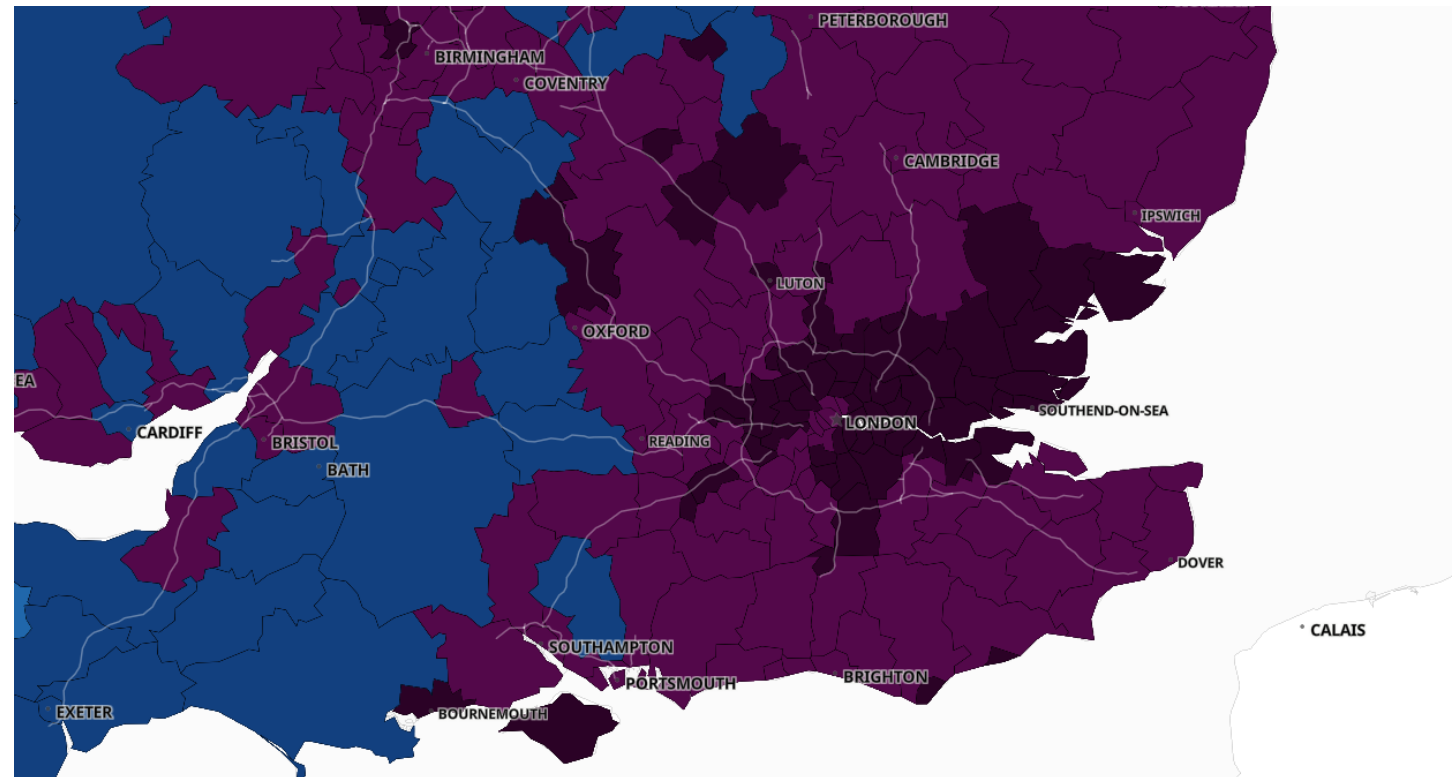

Dark green - 50 to 99

Light blue - 100 to 199

Dark blue - 200 to 399

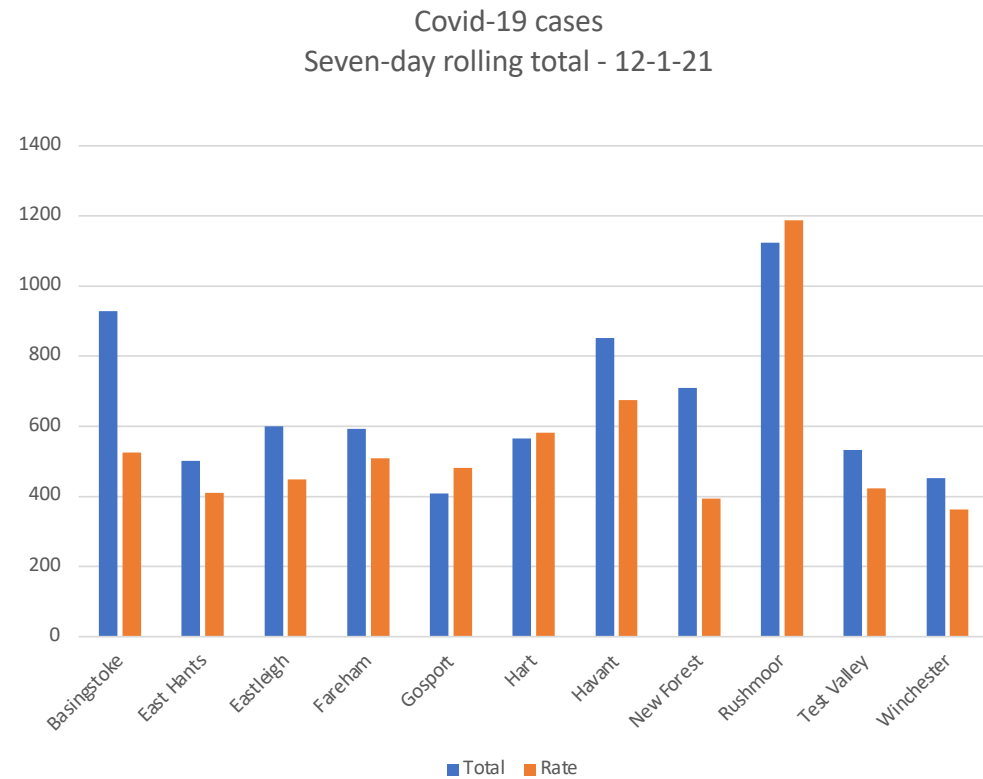

Dark red – 400 - 799

Black - 800 +

Percentage increases in new cases, month on month

Percentage increases
month on month September to January 12

This chart shows the rate of spread of the virus month on month in Hampshire districts. If the increasing percentage is above 100% it shows it is still spreading, under 100% indicates it may be under control and the rate of infection is reducing. Currently it is still spreading in most districts – at 12 January, with only 38% of the month past, any district showing a higher percentage shows the infection rate is increasing; a lower percentage shows it is falling.

See the following table for details
